

Using the UF Homepage as our design baseline, here is the UI/UX feedback for QEC:

- **Brand Alignment:** The color palette aligns well with the core UF branding.
- **Button Styling:** The distinct styling for the "Participate" button (using a purple background) works well, effectively enhancing visual hierarchy and accessibility.
- **Component Geometry:** While the QEC design utilizes softer, curved lines compared to the rigid, straight edges of the UF Homepage, this deviation is acceptable as it aligns with the established Survey branding.

To ensure stricter alignment with UF branding, I have compiled a few specific issues below — primarily focusing on typography and font style consistency.

Issue	Reference (UF Homepage)	Status
1. H1,H2 font style on page (outside tables and bordered containers) is Space Grotesk  The screenshot shows the top of the QEC Challenge page. It features the 'Unitary Foundation' logo, the title 'QEC Challenge', and a link to 'Read the whitepaper'. Below this is the 'Primary tracks' section with a description: 'Computed grid of locality x check weight, c codes also compete in the looser ones.' and a 'Codes' section stating '41 total, 38 records'. A search bar is visible at the bottom of the screenshot.	H1,H2 = Manrope	TBD
2. CTA (Call-to-action) buttons font style is Manrope  The screenshot shows three buttons: 'FAQ', 'References', and 'GitHub'. Below them is a large purple 'Participate' button.	CTA = Space Mono	TBD
3. Header numbers font style is Manrope  The screenshot shows a row of four boxes with numbers: '22 submitted codes', '19 literature baselines', '27 certified exact', and '21.778 best kd/m on the board'. Below this are three numbered steps: '1 Build a code', '2 Open a PR', and '3 Climb the board'.	Header numbers = Space Mono	TBD

4.

Table / in Container Headers font style is inconsistent (Manrope/Space Grotesk). Font casing is Sentence case.

	weight ≤ 4	weight ≤ 6	weight ≤ 8	any weight
2D-local single				
2D-local bilayer		20 codes [[288,8,12]] kd²/n 4	21 codes [[294,12,14]] kd²/n 8	21 codes [[294,12,14]] kd²/n 8
unrestricted	7 codes [[16,2,4]] kd²/n 2	36 codes [[288,12,18]] kd²/n 13.5	40 codes [[180,20,14]] kd²/n 21.778	41 codes [[180,20,14]] kd²/n 21.778

1

Build a code

A CSS-qLDPC code, written as one JSON file with its parity checks and a distance witness.

2

Open a PR

Add it under codes/. CI runs the verifier on every submission automatically.

3

Climb the board

If it advances a track's frontier it is highlighted. Click any row for the witness, certificate, and checks.

CODE	TYPE	N	K	D	KD²/N	W	AUTHORS	MODEL	DATE
★ [[180,20,14]]	280A coset	180	20	d ≤ 14	21.778	8	@FarLab	🔥 Claude Opus 4.8	2026-

Table / in Container Headers = Space Mono

Font case = Upper case

TBD

5.

For optimal UX, I would suggest to also consider the following:

5.1.

No on hover styling for hyperlinks and buttons

QEC Challenge

Find better quantum LDPC codes. [Read the whitepaper.](#)

Participate

Add a different on hover styling

TBD
